

**STATUS OF THE CLAIMS**

**Claim 1 (Original)** A highchair, comprising:

a base portion;

a seat portion; and

a pneumatic cylinder lifting means, wherein both ends of the lifting means are connected to the base portion and the seat portion, respectively.

**Claim 2 (Original):** The highchair according to claim 1, wherein the base portion is connected to the lifting means by a retaining clip and a fixing block, the other end of the lifting means is connected to the seat portion by a pivoting device so that the lifting means can pivotally rotate into a folded and horizontal position with respect to the seat portion by 90 degrees.

**Claim 3 (Original):** The highchair according to claim 2, wherein the pivoting device comprises an outer button, an inner button, a button spring, a connecting piece and a seat cover.

**Claim 4 (Original):** The highchair according to claim 3, wherein the lifting means can pivotally rotate into a folded and horizontal position with respect to the seat portion by pressing the inner buttons and outer buttons.

**Claim 5 (Withdrawn):** A highchair, comprising:

a seat portion having a body and a pair of attaching sections fixedly provided on both sides of the body;

a pair of leg frames on both sides of the seat portion; and

a pneumatic cylinder lifting means with two ends thereof connected to the seat body and the lower end of the leg frame.
